EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Fogarty on 05/04/05.

The application has been amended as follows:

In the Abstract on line 2, delete, "detection means" and insert, -detector-.

In the Abstract on line 4, delete, "control means" and insert, -controller-.

In the Abstract on line 5, delete, "detection means" and insert, -detector-.

In the Abstract on line 6-7, delete, "driving means" and insert, -driver-.

In the Abstract on line 7, delete, "estimation means" and insert, -estimator-.

In the Abstract on line 9, delete, "correction means" and insert, -corrector-.

In the Abstract on line 11, delete, "estimation means" and insert, -estimator-.

In the Abstract on line 11, delete, "comparison means" and insert, -comparator-.

In the Abstract on line 13-14, delete, "addition means" and insert, -adder-.

In the Claims, cancel claims 9-18 in their entirety.

In the Claims, cancel claims 25-68 in their entirety.

The following is an examiner's statement of reasons for allowance: Claims 1-8 and 19-24 are allowed as the prior art, in particular Kadlec et al. (US 5,684,650) does not teach or suggest the applicant's invention. Claims 1 and 19 teach a method and means for a disk drive. The

distinguishing elements of the claims teach generating a voltage estimation signal that is an estimate of a voltage signal, which is generated when driving actuator means for positioning the head, based on a driving signal for the actuator means and the voltage signal; comparing the voltage estimation signal with the voltage signal, and generating a deviation signal which indicates a difference between the voltage estimation signal and the voltage signal; adding a signal obtained by multiplying an integral signal, which is obtained by integrating the deviation signal, by a first coefficient and a signal obtained by multiplying a proportional signal proportional to the deviation signal by a second coefficient, and thereby generating a disturbance estimation signal; combining the position control signal and the disturbance estimation signal, and generating the driving signal; and driving the actuator means by the driving signal, and positioning the head relative to the disk.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason C. Olson whose telephone number is (571)272-7560. The examiner can normally be reached on Monday thru Thursday 7:30-5:30; alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Hudspeth can be reached on (571)272-7843. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
